

Machine Learning Lab Assignment

Select any one of the datasets below from Kaggle and build a classification model using Gaussian Naive Bayes and analyse its performance.

Part A:

- a. Breast Cancer Wisconsin Dataset
- b. Wine Quality Dataset

Evaluate the model using the following metrics: Accuracy, Precision and Recall.

Part B:

Perform the following tasks

- a. What type of dataset did you select from Kaggle and why?
- b. What preprocessing steps are necessary before applying Gaussian Naive Bayes.
- c. How do you handle missing values in your dataset.
- d. Why is feature scaling usually not required for Gaussian Naive Bayes?
